AGG contains:

- Astragalus membranaceus Bge. (1:20) High Astragaloside
  Replenishes chi, immunity, respiratory, bone marrow, anti-cancer, anti-aging.
- Grape Seed (1:100) 99.8% Proanthocyanidine
  Anti-oxidant, anti-allergic, strengthens capillary veins, edema, arthritis, and prostate.
- Green Tea (1:100) 95% Polyphenols
  Catechins are 90% of the polyphenols. Of this, EGCg is about 40% of catechins. This is the highest concentration of polyphenols, catechins, EGCg and antioxidants in any whole green tea. Also good for skin and anti-cancer.

Andrew Weil, MD, interview on CNN with Larry King, March 2003, “Astragalus is the first thing used for cancer patients.”

Dr. Donsbach's "Let's Talk Health" V.3, N.4, May 2000
Purdue University researches may have discovered at least part of the reason why green tea is associated with lowered cancer risk. EGCg, a potent antioxidant found in green tea, inhibits an enzyme that cancer cells need to divide and reproduce.

Overall functions:

- Increased collagen (a skin protein) and elastic binding-improves skin smoothness and elasticity-acts as an internal and external sunscreen.
- Inhibits inflammatory enzymes-reduces pain in arthritis, sports injuries, and some headaches.
- Inhibits histamine formation-reduces allergic reactions.
- Strengthens capillaries, arteries, and veins-aiding resistance to leakage, bruising, varicose veins, strokes and reduces diabetic retinopathy.
- Reduces risk of phlebitis, edema and swelling of the legs.
- Improves joint flexibility.
- Helps improve sluggish memory, vitality, and overall sense of well being.
- Lowers blood pressure, cholesterol and helps atherosclerosis.
- Prostate
- Skin (skin cancer)
